

Tristan Jessup

Applied AI systems & integration · Senior bench technician, Geek Squad

Lexington, KY area · tristan@mindlink.dev · mindlink.dev · github.com/topstolennname · linkedin.com/in/john-jessup25

SUMMARY

Most senior bench technician at Geek Squad (Best Buy Store #259), CompTIA A+, Network+ and Security+ certified and an Apple Certified Repair Technician. I design agentic tooling that pairs small language models with scripted tools, and build AI governance experiments where every claim is mapped to a test. Seeking enterprise AI integration, AI solutions and AI architecture roles.

EXPERIENCE

Advanced Repair Agent · Best Buy / Geek Squad, Store #259 Apr 2021 – Present

- Most senior bench technician in the store; mentor newer associates and take the most complex escalations.
- Diagnose and repair hardware and software faults across Windows and macOS, including data recovery, NVMe/SSD cloning and migration, BIOS/UEFI issues, and malware remediation.

Founder & independent researcher · Mindlink Research Group 2025 – Present

- Build and publish AI governance and multi-agent research code in the open, including MCX and Emergent Divergence.
- Author of the Concord of Coexistence and the Meta-Concord draft 0.4 white paper.

Earlier roles: Sales, Tesla · City Letter Carrier, United States Postal Service · Customer Service Specialist, Top Drawer Furniture (furniture retail)

SELECTED AI WORK

MCX: Meta-Concord reference implementation github.com/topstolennname/mcx-experiment

Python (Apache-2.0) reference implementation of domain-assent authorization for agent actions: Ed25519-signed evidence, a separately written verifier, a fail-closed enforcer, a red-team catalogue, and CLAIMS.md mapping each white-paper claim to a test or marking it not shown.

Emergent Divergence github.com/topstolennname/emergent-divergence

Controlled multi-agent LLM experiment (3 conditions × 2 backends × 4 seeds) with eight falsifiable hypotheses, a decoding-noise null baseline, full run provenance, and a hard cost cap. Pilot results published, including a non-significant trend.

Anvil (paused prototype) mindlink.dev/work/anvil

Architecture for a bench-diagnostics assistant: Markdown skill library, small language models first with escalation to larger tiers, and PowerShell tools behind a structured JSON contract.

Smaller builds

Local photo auto-tagging (Ollama vision model → exiftool metadata → Dolphin extended attributes); Home Assistant automation and a security audit of a third-party vehicle-integration repository.

CERTIFICATIONS

CompTIA A+ · CompTIA Network+ · CompTIA Security+ · Apple Certified Repair Technician

EDUCATION

B.S. Information Technology, AI concentration · Strayer University In progress

General studies coursework · University of Kentucky 2008 – 2010

SKILLS

AI systems: Agentic tool use & orchestration, Small and local models (Ollama), Multi-agent experiment design, LLM evaluation & behavioural analysis, AI governance & authorization design, Claim-to-evidence documentation

Developer tools: Claude Code, Cursor, MCP, Open-WebUI, Python, PowerShell, Bash, Git, Docker, Obsidian

Systems & hardware: Windows & macOS diagnostics, Linux (Kubuntu, Arch, CachyOS), Data recovery, NVMe/SSD cloning & migration, BIOS/UEFI, Endpoint security & malware remediation, Networking
